Association of Parkinson's Disease and Its Subtypes with Agricultural Pesticide Exposures in Men: A Case–Control Study in France

Frédéric Moisan, Johan Spinosi, Laurène Delabre, Véronique Gourlet, Jean-Louis Mazurie,
Isabelle Bénatru, Marcel Goldberg, Marc G. Weisskopf, Ellen Imbernon, Christophe Tzourio,
and Alexis Elbaz

Figure S1. Indicators of pesticide exposure. ^aReference date: for cases, the year of PD onset; for controls, the year of PD onset of the matched case.

Table S1. Independent and joint effects of intensity of exposure to insecticides and fungicides among male farmers.

Table S2. Association of Parkinson's disease with indicators of professional exposure to pesticides among male farmers according to three latency periods.

Table S3. Association of Parkinson's disease with indicators of professional exposure to broad classes of pesticides (herbicides, fungicides, insecticides) among male farmers restricted to cases with disease duration of 3 years or less.

Table S4. Characteristics of controls and tremor dominant and non-tremor dominant Parkinson's disease cases among male farmers.
